DETAILED ACTION

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-42 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The recitation in each of the independent claims that the structure is arranged as a layered structure "of one or more monolayers" fails to specifically define and limit the inventive structure. Clearly, a structure comprised of a single monolayer is substantially different from one comprised of plural monolayers in that, once a plurality of layers are deposited to form a thicker combined layer of Zr-Sn-Ti-O, the limitation that the layers were initially deposited as "monolayers" loses its structural significance. Therefore, the invention is not clearly defined with respect to the intended limitation regarding monolayers or as to the specific thickness of the claimed Zr-Sn-Ti-O layer. While a recitation of a single monolayer is structurally significant, the alternative form that the claims take renders the final device structure unclear and undefined since a plurality of monolayers cannot actually be identified structurally.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-42 are further rejected, insofar as understood, under 35 U.S.C. 103(a) as being unpatentable over Schneemeyer in view of Watanabe and Nagae, all of record. To the extent that the claims, which recite two structurally different alternatives, can be understood, it appears that the Zr-Sn-Ti-

O layer taught by the cited references would meet the claimed alternative where more than a single monolayer of Zr-Sn-Ti-O is formed.
